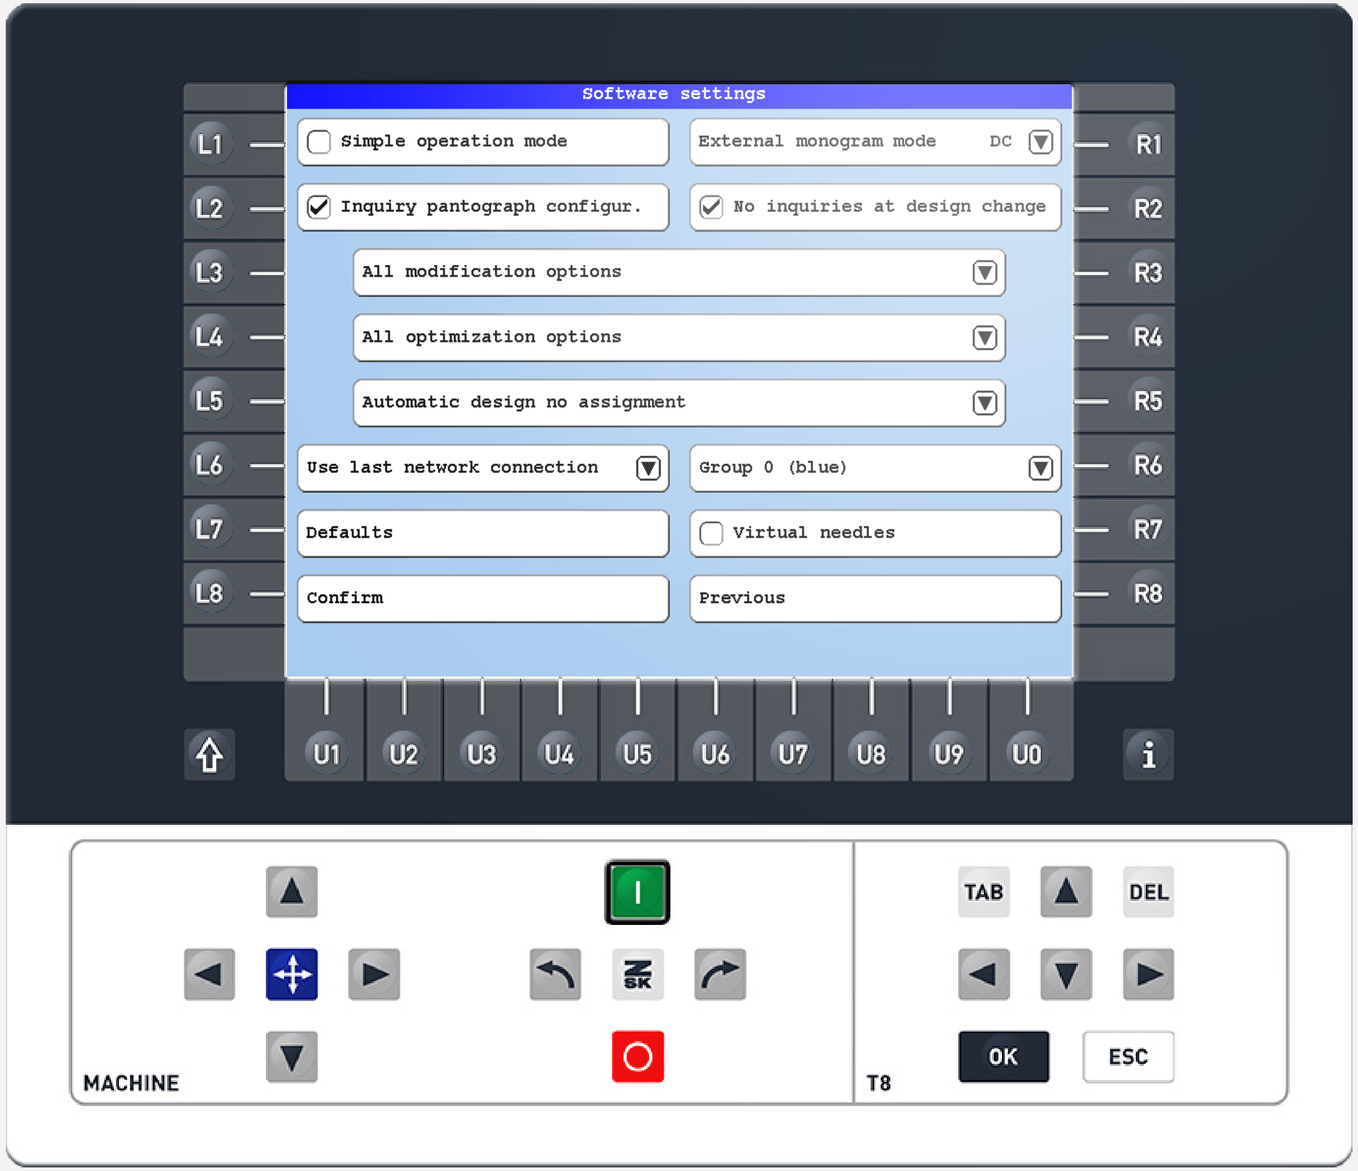
DEACTIVATE INQUIRIES

Did you know this T8 function yet?

VOL. 021

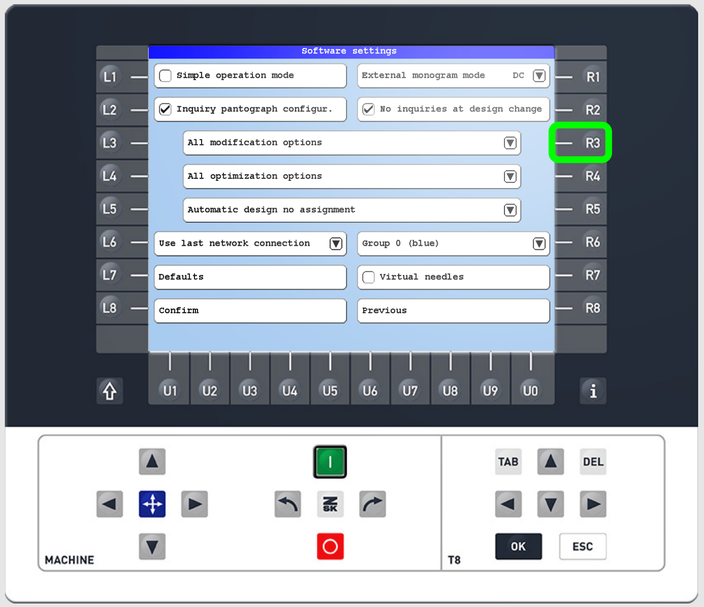
Did you know?



What?
In the software settings, inquiries such as those regarding pantograph configuration, optimization, or design change can be deactivated or configurated.

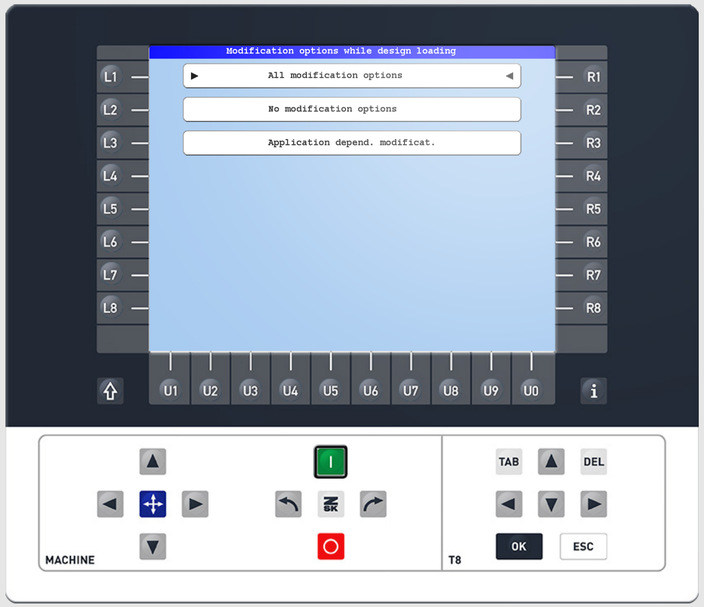
Why?
In general, inquiries serve the purpose of safety, reminding the user to make necessary settings if needed. Experienced users often do not require these reminders. Disabling these inquiries eliminates the need to confirm them, thereby enhancing efficiency during work.

Step1
After entering the software-/hardware settings by pressing the L7 function key on the start screen, press R4 to enter the software settings.



Step2
Check or uncheck inquiries according to your specific needs. Buttons with a dropdown arrow lead you to a configuration screen.

E.g. press R3 to enter the tab „modification options while design loading.“



Step3
Use the function keys to select the desired setting.
